

THE WED CINEMA - GEMINI IMPLEMENTATION GUIDE

Step 1: Give Gemini the complete project context and tell it to CONTINUE the existing project. Do not remove anything, only update and extend.

Step 2: Build modules in order: Homepage -> Authentication -> Photographer Dashboard -> Upload Engine -> AI Gallery -> OTT Player -> TV Connect -> Analytics -> Billing.

Step 3: Ask Gemini to generate production-ready Next.js + TypeScript + Tailwind code with APIs, database schema, and deployment scripts.

Step 4: Build and test each module separately, then integrate.

Step 5: Deploy frontend on Vercel and backend/media services on AWS (S3, CloudFront, PostgreSQL, Redis).

Step 6: Enable AI Face Search, adaptive streaming, and photographer branding.

Step 7: Create demo weddings and founder onboarding pages.
